1. Introduction & Features
2. Blocks and Formatting

Introduction & Features

Introduction to streamflow-docker

- ****Containerized Data Engineering****: Standardized environment for Spark, Kafka, and Airflow.
- ****Docker-based LaTeX Compilation****: Build slides seamlessly using LaTeX Workshop's Docker integration.
- ****Metropolis Theme****: Clean layout focused on typography and content, avoiding visual clutter.

Introduction to streamflow-docker

- ****Containerized Data Engineering****: Standardized environment for Spark, Kafka, and Airflow.
- ****Docker-based LaTeX Compilation****: Build slides seamlessly using LaTeX Workshop's Docker integration.
- ****Metropolis Theme****: Clean layout focused on typography and content, avoiding visual clutter.
- ****Interactive Elements****: Use standard Beamer overlay commands to reveal points sequentially.

Flexible Page Layouts (Columns)

Left Column (Text/Concepts)

- Perfect for explaining a diagram or listing details.
- Keeps slides readable by dividing content horizontally.

Right Column (Code / Callouts)

```
# To start the pipeline:  
make up  
  
# To tear down and clean:  
make down
```

Blocks and Formatting

Emphasizing Content with Blocks

Standard Block

Use standard blocks for definitions, core notes, or general information.

Alert Block

Use alert blocks for warnings, critical takeaways, or equations.

Example Block

Use example blocks to highlight code snippets, cases, or illustrations.
